The Most Delicious Supplements Ever!

WHY INFUSED EDIBLE SUPPLEMENTS?

There's a large and growing trend to review personal consumption habits in an effort to improve one's approach to eating healthy. Accentuated by the Coronavirus concerns, countless media coverage is focused on this healthier eating trend. Related to this the concept of "Functional Food", many unusual edible choices are now being infused with "healthy" ingredients in an effort to deliver added health benefits and an alternative delivery system.

The Academy of Nutrition and Dietetics define functional foods as "whole foods along with fortified, enriched or enhanced foods that have a potentially beneficial effect on health when consumed as part of a varied diet on a regular basis at effective levels based on significant standards of evidence."

Immunity Goodness is a pioneer in this segment, infusing dozens of minerals, vitamins and botanical ingredients that combine the health benefits of chocolate, and multiple nutraceutical ingredients to create their new line of Immunity Boosting products. Immunity Goodness- a division of ChocolateText, operator of a chocolate laboratory and manufacturing facility for over 25 years and specializes in these types of infusions.

Immunity Goodness boosts formulas that include a generous percentage of your daily value of crucial, science-based vitamins and minerals that boost immunity, including Vitamin C and Zinc. Also included are plant-based ingredients such as Elderberry and Curcumin from Turmeric. There are a variety of products that will satisfy all chocolate enthusiasts by offering deliverables in their favorite gourmet chocolate: including Belgian, Premium American Milk and Dark, Sugar-Free, and Vegan Friendly.

A safe assumption is that many people enjoy chocolate and candy and would prefer it to traditional delivery systems like pills, tablet, drops, etc. The challenge is that most vitamins, minerals, etc. have an unpleasant taste or require large amounts to be an effective dose. Working with a commodity like chocolate, the proper flavor and format must be selected while keeping in mind the desired end product with flavor enhancing that would not adversely affect the tempering and finishing of the chocolate. A secondary concern is correct packaging that is consistent with chocolate and the desired dosage.

Vitamin C helps maintain a healthy immune system, promotes cardiovascular health and helps maintain healthy eyes.* ¹

Zinc is required for numerous processes in your body, including gene expression, enzymatic reactions, immune function, protein synthesis, DNA synthesis, wound healing, growth and development.* ²

Elderberries promote general well-being and help maintain cardiovascular health.* ³

Tetrahydrocurcumin (from Turmeric) has been used in India for thousands of years as a spice and medicinal herb. Tetrahydrocurcumin, the main active ingredient, has been demonstrated to have beneficial properties that promote overall health and cell integrity.* ⁴

Chocolate eaters welcome a host of benefits. Dark chocolate especially promotes heart health.* ⁵

Vitamin C+ Zinc+

IMMUNITY PASTILLES Tin- Blueberry Hard Candies

Backside and Supplemental Information

500mg GLUTATHIONE PRECURSORS+ 15 pc. boxes

Glutathione is one of the body's most important and potent antioxidants.

Each of your cells contains glutathione, a substance created from three amino acids: cysteine, glutamate, and glycine. The body's "master antioxidant," glutathione, directly inactivates dangerous molecules directly responsible for aging, DNA damage, and oxidation – or "rusting" – of your cells. Glutathione also plays a key role in energy production and methylation, two critical processes at the core of normal cellular function.

While most antioxidants are found in the foods we eat, glutathione is produced by your body. It is primarily made up of three amino acids: glutamine, glycine and cysteine (cystine) which are generously included in our product. It can also be naturally increased with Vitamin C and Turmeric extract.

Boost your Immune System, anti-oxidant support and glutathione formation with a generous percentage of your Daily Value of crucial, science-backed amino acids, vitamins and minerals.

Maintaining adequate levels of glutathione is incredibly important!
